DECISION RECORD and FINDING OF NO SIGNIFICANT IMPACT

Clay Creek Recreation Site Water System Upgrade
Environmental Assessment No. OR-090-EA-01-15

FINDING OF NO SIGNIFICANT IMPACT

On the basis of the information contained in the Environmental Assessment, and all other information available to me, it is my determination that implementation of the proposed action or alternatives will not have significant environmental impacts beyond those already addressed in the *Eugene District Record of Decision and Resource Management Plan* (June 1995), with which this EA is in conformance, and does not constitute a major federal action having a significant effect on the human environment. Therefore, an environmental impact statement or a supplement to the existing environmental impact statement is not necessary and will not be prepared.

DECISION:

Based on the analysis documented in the Environmental Assessment (EA) OR-090-01-15, and the Finding Of No Significant Impact it is my decision to select the proposed action, Alternative 1. All of the project design features and mitigating measures identified in this EA will be implemented to mitigate any impacts to existing habitat and resources. In addition, all required mitigation measures in pending Biological Opinions, from the U. S. Fish and Wildlife Service (USFWS) will also be implemented.

DECISION RATIONAL

The proposed Action was selected because it best meets the goals and objectives of ecologically operating safe recreation sites. The upgrade to the water system is a needed and prudent project for health and safety reasons. The proposed action is tiered to and is in conformance with the *Record of Decision for Amendments to Forest Service and Bureau of Land Management Planning Documents within the Range of the Northern Spotted Owl, April 1994 (ROD)* , and the *Eugene District Record of Decision and Resource Management Plan, June 1995 (Eugene District ROD/RMP)* as amended by the *Record of Decision for Amendments to the Survey and Manage, Protection Buffer, and other Mitigation Measures Standards and Guidelines, USDA Forest Service and USDI Bureau of Land Management January 2001*.

Watershed analysis has been completed for the Upper Siuslaw Watershed. The proposed action is in conformance with that document's recommendations and findings.

The trenching and installation of pipes, and pruning or removal of a couple of trees would have no effect on two epiphytic lichen species, *Platismatia lacunosa*, a Survey and Manage Category C lichen species or *Ramalina thrausta*, a Survey and Manage Category A species which were found in the campground.

Construction equipment will be cleaned to remove mud, debris, and vegetation material prior to arriving at the project site in order to decrease the potential for the spread of noxious weeds and nonnative plants during the proposed water system upgrade. Disturbed areas will be seeded with a native species mixture after the construction is completed.

No cultural resources have been found in the project vicinity.

CONSULTATION AND COORDINATION

Pursuant to the Endangered Species Act, formal consultation has been initiated with the USFWS regarding the proximity of potential Murrelet and Spotted Owl habitat to the proposed project and the possible audio disturbance caused by the construction activities. A Biological Assessment was submitted to the USFWS. According to this Biological Assessment installation activities during the less sensitive period of the nesting season may affect, but is not likely to adversely affect the Federally listed Endangered spotted owl and marbled murrelet. The USFWS is expected to issue Biological Opinion on this proposal later this summer. This action will not take place prior to the issuance of this Opinion.

The proposed action is consistent with the description and terms and conditions under the Programmatic Biological Assessment and Biological Opinion for Ongoing USDA Forest Service and USDI Bureau of Land Management Activities Affecting Oregon Coast Range Province, Oregon for the Oregon Coast coho salmon issued by the National Marine Fisheries Service (NMFS) - September 1998 and extended on July 5, 2000.

PUBLIC COMMENTS

Both the EA and preliminary FONSI were advertised in the Eugene Register-Guard on June 13, 2001, as available for a 15-day public review period. Copies of the EA and preliminary FONSI were mailed to interested individuals on our mailing list. No public comment letters were received. Copies of the original EA and FONSI are available for viewing at Eugene District Office and on the internet at <http://www.edo.or.blm.gov/nepa/>
